California Department of Industrial Relations
Human Resources / Certification Unit
Re: IT Service Technician, Information Technology Associate (JC-521522)

Dear Members of the Selection Committee,

I am applying for the IT Service Technician position, Information Technology Associate, Job Control 521522, with the Department of Industrial Relations. I am a recent graduate with a Bachelor of Science in Network Engineering and Security and four CompTIA certifications, A+, Network+, Security+, and Cloud+. My background is built on hands-on troubleshooting and systems work, and this role is a direct match for the kind of technical support I have trained to do.

The core of this position is diagnosing and resolving hardware, software, and peripheral problems for end users and keeping their systems running, and that is the work I am strongest at. Through a hands-on lab assessment and my current cybersecurity internship, I have troubleshooted Windows and Linux issues from the first report through to a verified fix, working problems at every level from a quick desktop setting to a server-side correction. I run a home lab on a Proxmox virtualization host where I build and deploy system images, create and troubleshoot virtual machines, and manage user accounts in Active Directory, which is the same hands-on work this role calls for. I also document each issue and its fix in plain language so the solution can be understood and repeated. I explain technical problems the same way, in terms of what they mean for the person rather than the jargon behind them.

I am drawn to this position because it lets me do the technical work I spent my degree and certifications preparing for, and because I am looking to build a stable, long-term career rather than just take the next job. I live in the Sacramento area and am invested in staying and growing here. The Department of Industrial Relations works to protect the wages, safety, and benefits of California workers, and I would be glad to support that mission by keeping the technology behind it running reliably.

I am early in my career, but I learn quickly and I prove it by doing. I built my lab, earned my certifications, and took on real security work in my internship on my own initiative. I am ready to bring that same drive to a service desk and field support team and to grow within the Information Technology classification series.

Thank you for considering my application. My resume, Statement of Qualifications, and State Application (STD 678) are included for your review, and I would welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Uriah Raffer
